# PlaceU Custom Widgets

Timers

The PlaceU timer was designed to be very simple to understand, and collapsible so as not to be very distracting for the student taking an exam. At a certain interval before a timed assessment was about to end, the timer would expand and turn yellow for an optimal visual flag. Because there was a long list of considerations from university admins in terms of the behavior of the timer depending on their needs, there were requirments for a robust control panel so that each university / professor could customize the timer's behavior.

My team recieved pushback from the development team due to the added scope that they had not originally planned for. My team was quickly able to present research and data on the customers and students we had interviewed in focus groups and usability sessions, and were able to demonstrate the importance of the feature as we had specified it for the sake of customer satisfaction.

The pagination and wizard steps depicted here worked in tandem with the timer and were also customizable by the admin.
